Candles with concrete base

Instructions No. 1828

Difficulty: Beginner

Working time: 1 hour

Candles come in a wide variety of shapes and colours, with or without scent and in all sizes. This is no wonder, because candlelight creates a beautiful atmosphere all year round. We have cast our candles with a concrete base, making them even more original. In this guide you will learn how to cast these beautiful candles with a concrete base.

Pyramid candles:

Fold up the **mould** and fix everything with the enclosed clamping rail**.** The paper mould is coated on the inside with silicone, which prevents the hot wax from sticking after filling into the mould. At the same time, the coating makes the mould easier to remove. Place the mould at a slight angle in the mould holder**.** Wrap the waxed **wick** around a rod a few times, place it on top of the pyramid and hang the wick in the **mould.** The wick is pulled through the tip at the bottom and finally **sealed** with the enclosed **silicone disc**

Now mix the **concrete** with water according to the package instructions and put the casting compound aside. Now melt the **wax** in the melting pot and add some **coloring granulate** as desired. Pour the wax **into** the mould, let it dry a little and **add** the concrete mixture **so that** the wax and concrete can bond a little. The finished candle should dry in the mould for at least 24 hours.

You have never cast candles yourself and do not know what to look out for? In our basic instructions for candle making you will find everything important explained in detail. Just click here.

Must Have

Paraffin wax, 1000 g

Weight: 1000 g
Material: Paraffin

11,99 € (1 kg = 11,99 €)
~~RRP 12,49 €~~
