Glass bottles in strawberry look

Instructions No. 328

Difficulty: Beginner

Working time: 35 Minutes

Sweet, red strawberries can be processed into delicious liquid things. Fill them into matching bottles, which you have designed yourself with porcelain paint. An absolute must have in summer!

Here's how it works:

At the beginning, the bottles are wiped with glass cleaner so that the surfaces are free of dust and grease. Now mix the two red tones of the porcelain paint in equal parts and apply this mixture to the entire surface with a small sponge up to the neck of the bottle. The brown porcelain paint is applied to the neck

After drying, the bottles are placed in the cold oven and heated to 160°C. Once the temperature is reached, the paint must be baked for 90 minutes. The bottles then remain in the oven until they have cooled down completely.

Now start with the Pearl-Pen yellow drops on the bottles. While these dry transfer the template for the sheet to the Felt. Cut out the sheet and cross the middle to the dotted line. Then enter the green Pearl-Pen the veins of the leaf and draw a contour around the leaf. After drying, pull the leaves over the bottle necks

Now also the plates and the corks are painted with brown porcelain paint. When the paint is dry, glue the two parts together with wood glue. Finally, make small signs for the appropriate lettering from photo cardboard and attach them to the bottles with Glue pads .
