Jewelry bowl with motif paper

Instructions No. 3197

Difficulty: Beginner

Working time: 30 Minutes

Do you want to create individual jewelry bowls that serve as both decoration and practical storage space? It's child's play with Raysin casting slip! In these instructions, you will learn how to create your own jewelry bowls with Raysin 100 or Raysin 200 - from from mixing to the final finish. Be inspired and discover the versatility of these materials!

The difference between **Raysin 100** and **Raysin 200**

Before we start, let's briefly clarify which Raysin is best suited to your project:

Raysin 100 is perfect for smaller objects and offers lower strength. However, it is ideal if you want to create intricate details. **Raysin 200**, on the other hand, offers higher strength and is suitable for larger casting projects where stability is important.

This is how you create your unique jewelry bowls:

First, prepare your template by transferring the desired shape onto cardboard and cutting it out. Place the template in the casting mold with the design side facing down. This step ensures a clean result and ensures that the design of your jewelry bowl is shown to its best advantage.

Mixing the casting compound is a crucial moment: you combine the powder with water until an even, lump-free consistency is achieved. It is important to stir thoroughly so that no powder settles at the bottom. Then pour the mixture into the prepared mold and tap it gently on the tabletop to ensure even distribution and remove any air bubbles.

After about one hour you can carefully release the mold. However, for complete strength, you should allow your jewelry bowl to air dry further . Irregularities or rough edges can easily be smoothed out with a little sandpaper .

The final touch is entirely up to you: you can decide whether you want to keep the chic matte look or give it a shiny, professional look with **Stamperia Fluid Gloss**. The Fluid Gloss is simply applied directly to the bowl and provides additional protection and an elegant shine.

Have fun casting!

Must Have

Silicone casting mould "Coaster oval"

Fill volume: 150 ml
Length: 17.8 cm
Width: 9.5 cm
Height: 1.6 cm
Material: Silicone

5,99 €
