Spring greeting with flowers and transfer paper

Instructions No. 1570

Difficulty: Advanced

Working time: 50 Minutes

This spring decoration with artificial flowers is guaranteed not to fade during the Easter season. The design with transfer-Paper gives the simple coloured metal buckets a particularly beautiful look.

Ever blooming Easter decoration

Give**yourself a** treat and create a great **Easter arrangement** with artificial flowers, which will be a great eye-catcher during the entire Easter and spring season.

Dry plug-in foam is pressed into the decorative pots decorated with Transfer-Paper . Simply put tulips, crocuses, daffodils and pearl hyacinths into a great flower arrangement. Iceland moss covers the visible surface of the foam. Easter eggs and some decoration-Willow or other floristic accessories complete the creation.

Transfer-Paper to decorative bucket

Transfer-Paper is a Paper, which is printed with a finished motive mirror-inverted. It has been developed especially for designing with transfer techniques and is particularly easy to transfer.

Select a suitable motif from a Transfer-Paper sheet, cut it as accurately as possible. The surface of the decorative bucket to which your motif is to be transferred is now **coated** with transfer medium. The cut-out motif is then placed in the moist medium with the printed side facing down. Spread another layer of transfer medium thickly on the positioned Paper.

Allow the transfer to dry thoroughly. Only then, with the help of a damp sponge, rub off the layers of paper little by little until only still has the printing ink of the paper on the bucket

Then protect the applied transfer by rubbing it with a matt **Protective varnish** coat

With casting design it becomes personal

Finally, we have wrapped our decoration example around a name badge **cast** with a casting design. This makes the little decorative bucket a great, very personal souvenir

How small pendants and more are made from casting slip you can find out in the Instruction no. 1552 - Basic instruction casting design.
