

Weihnachtsdorf mit Betonhäusern

Instructions No. 1379

Difficulty: Advanced 

Create your own Christmas village! With creative concrete, the "Village" silicone mould, decorative accessories and these instructions, a magical Christmas world is quickly created!

Here's how it's done

The **Christmas houses** are cast in **concrete casting slip**. The mass is mixed as indicated on the product from manufacturer and poured into the silicone mould. After about 3 days the houses are dry and can be painted.

All houses are finished with white VBS Hobby Color Handicraft paint with white primer. Now enjoy painting **the** houses with a fine brush and Handicraft paint and with colour pencils: for the shingles, doors, windows and indicated fences the colours Ivory, green and Grey Brown are used. The reliefs on the houses, pre-modelled by casting, are a pleasant help.

For the Christmas village, the wooden picture frame is **converted** into a **tray** and painted with a Paint sponge and white Wood stain-paint. The sponge applies the paint particularly evenly, the paint lets the natural grain of the wood shine through well.

Now design your own village on a tray according to your personal taste: houses, fir trees, Lanterns, Arrange roe deer and a fence and glue it with a hot glue gun.

As a special something, you finally **apply** some decorative snow with a brush and a Spatula
